

This custom built mobile command and monitoring trailer was designed with the customer to provide a totally equipped, high tech and high quality trailer that will withstand over the road travel and then provide testing and monitoring of nuclear facilities.

This ATC trailer was built on a rugged all tube aluminum frame, and finished with custom built cabinets, counters, walls and ceilings to reflect a state of the art computer testing and monitoring center with a comfortable lounge. A garage area was equipped to transport robotic monitoring equipment.

Features included are: an on board generator, complete electricity, wire chases, CAT5 wiring, HVAC systems, custom lighting, decorator ceiling and walls. The cabinetry included work stations & desks, leather cushioned couches, a table, cabinets and a kitchenette.

How would you like your custom trailer built?
