

Our trailers are custom engineered to allow for this design. This trailer is all light weight aluminum construction, looks great and allows you to make a lot of heads turn on the highway. Newer generation trailers can accommodate larger openings and less obstruction with smaller pillars. Clear glass-side trailers can be built from 12' to 53' in length.

Get to a car show and you don't even have to worry about pulling the car out. And when the sun goes down light it up with custom lighting. These trailers are great for outdoor events, race events, marketing promotions, mobile exhibits and displays. We have built trailers for a visible reality art classroom, a think tank, a wrecked car for DUI awareness, a recruiting exhibit featuring a custom built Orange County Chopper and many others. What's your idea? We'll help you make it a reality.
