Titan 7680 TECHNICAL DATA SHEET

Titan 7680 is a single component anaerobic retaining adhesive, which develops high strength in bonding cylindrical parts: it can be applied to retain pulleys, gears, rotors and shafts; as well as to secure bushings, bearings and housing plugs. It will augment shrink and press fit assemblies in demanding vibrational and high-friction applications. Titan 7680 is certified to ANSI/NSF 61 Section 6: Drinking Water System Components.

Physical Properties - Monomer (Uncured)

Base Compound	Methacrylate Ester
Appearance	Green Liquid
Viscosity	1250 +/- 300 cps (Brookfield Spindle 3 @ 20 rpm, RVT, 25°C)
Gap Fill	.015"
Specific Gravity	1.1
Flash Point	>200°F / 93°C
Shelf Life	12 months unopened
Storage Condition	20°C / 68°F
RoHS-Compliant	yes

Physical Properties - Polymer (Cured)

Appearance	Green Solid
Locking Strength	High
Service Temp Range	-65 to 300 °F (-54 to 149 °C)
Full Cure Time	24 hours
Pin/Collar Strength	3500 psi 24.13 N/mm2

Performance of Cured Adhesive

	inch-pounds	Newton meters
Breakaway Torque	150.0 to 300.0	16.95 to 33.90
Prevailing Torque	250.0 to no limit	28.25 to no limit

Setting Time / Full Cure Time*

	15	minutes	/	24	hrs
Steel	15	minutes	/	24	hrs
Brass	15	minutes	/	24	hrs
Zinc-Plated	20	minutes	/	24	hrs
Stainless Steel	20	minutes	/	24	hrs

*68°F / 20°C, 65% RH

Specifications and Approvals

Mil-R-46082B, Type III; ASTM D-5363 AN 0421

Hot Strength (%RT strength, tested at temperature)

Heat Aging (aged at temp indicated and tested @ 22°C)

Solvent Resistance

Solvent	Example	Resistance
Alcohol	Ethanol, Methanol	+++
Ester (aromatic)	Ethylacetate	---
Ketone (aromatic)	Acetone, Benzophenone	---
Aliphatic hydrocarbon (alkanes)	Petrol, Heptanes, Hexane	++-
Aromatic hydrocarbons	Benzyl, Toluol, Xylol	++-
Halogenated hydrocarbons	Methylenchloride, Chloroform, Chlorobenzol	---
Weak aqueous acid	Nitrite, muriatic acid, sulphuric acid, phosphoric acid	+++ (--- if concentrated)
Weak aqueous base	sodium hydroxide solution, caustic potash	+++ (--- if concentrated)

General Instructions

Surfaces to be bonded should be clean and dry and free of grease. Product should be applied in enough quantity to fill all engaged threads. The product performs best in thin bond gaps. Very large gaps may create gaps that will affect the cure speed and overall strength. Good contact is essential. An adequate bond develops in 15 to 45 minutes and maximum strength is attained in 24 hours. This product is not recommended for use in pure oxygen environments and/or oxygen-rich systems and should not be selected as a sealant for chlorine or other strong oxidizing materials. This product is not designed for plastics, particularly thermoplastics where stress cracking of the plastic could result. It is recommended to confirm compatibility of the product with all substrates prior to use.

Curing Performance

The gap of the bond line will affect set speed. Smaller gaps tend to increase set speed. Activators may be applied to further improve set speed, but may also impair overall adhesive performance.

Storage

Products should be stored unopened in a cool, dry place out of direct sunlight. Products may be refrigerated for improved shelf life, but should be brought back to room temperature before use.
