

Pallet Changer with Robot Mount

Modification for use with Robot/Cobot

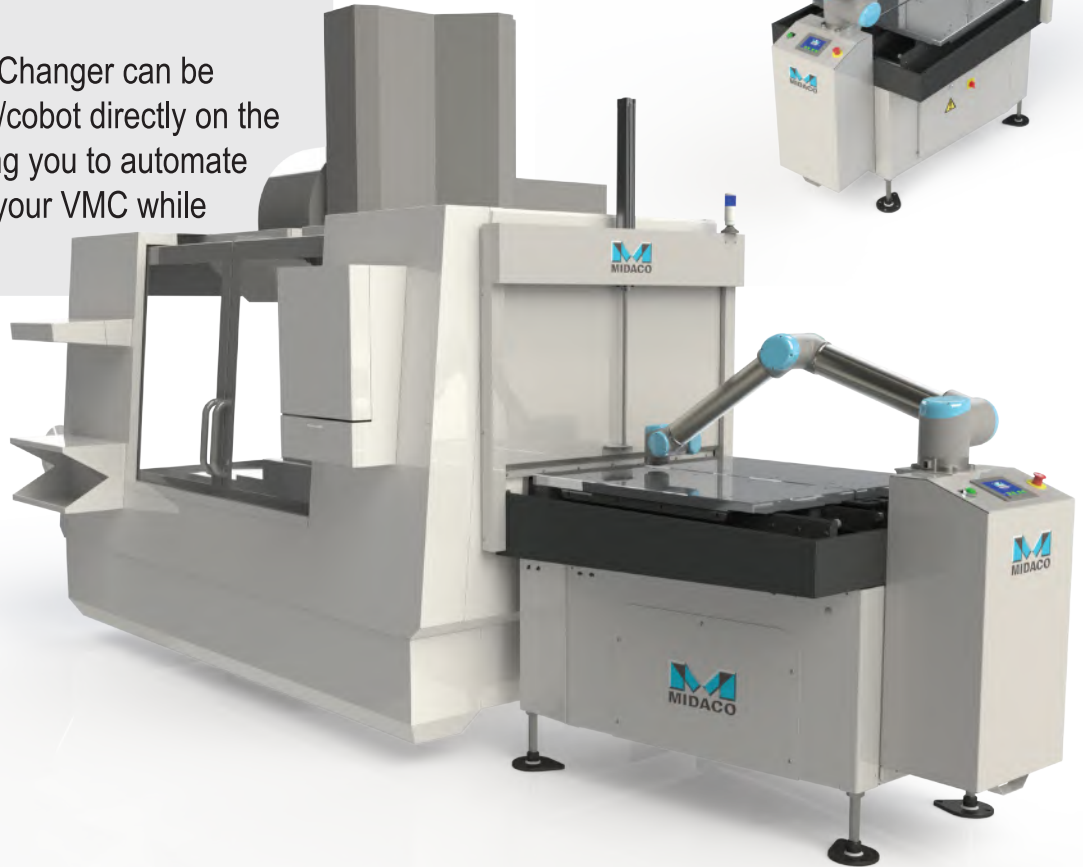

Need an Extra Hand?

MIDACO's A30SD & A40SD series Automatic Pallet Changers can be modified to mount Robot/Cobot arms directly on the pallet changer control panel for enhanced collaborative automation.

Automatic Pallet Changer for use with a Robot/Cobot

Eliminate the need for your VMC to sit idle while waiting for your robot/cobot to load parts from the front directly onto the machine table.

MIDACO's Automatic Pallet Changer can be modified to mount the robot/cobot directly on the shuttle control panel enabling you to automate part set-up tasks outside of your VMC while your machine is cutting.

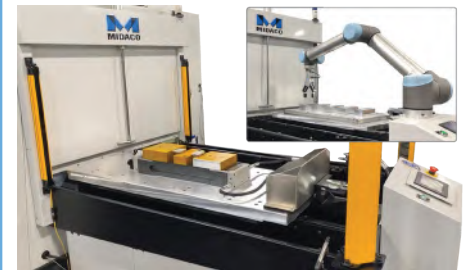

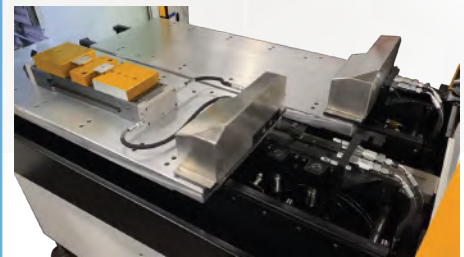

Reduce Strain by Automating Repetitive Part Loading Tasks

- MIDACO's control panel modification to fit robot/cobot* arms is available on NEW or EXISTING MIDACO Automatic Pallet Changers in the A30SD series with 30" x 15.5"-19" pallets (762mm x 393.7mm-482.6mm) up to the A40SD series with 40" x 19"-24" pallets (1016mm x 482.6-609.6mm).
- The robot/cobot* can easily access parts on a table or conveyor set up along-side of your MIDACO Automatic Pallet Changer and do the loading for you with precision and reliability.

**robot/cobot must be purchased separately from authorized dealer*

Enhance Your Productivity Even Further...

Add a MIDACO Hydraulic Docking System for automated fixture and vise clamping **WITHOUT** the need for hose management. Fixtures stay charged while in the VMC.

MIDACO pallet systems are designed for machines with stationary guarding. Some machines require options or customization. Patented. Contact your sales representative to confirm model and specifications for all applications. Machinery subject to modifications and amendments.
